

Avoid collision with an overhead structure in

4 EASY STEPS

DID YOU KNOW?

Every month, there is at least one incident of a vehicle hitting road structures such as pedestrian overhead bridges and gantries. This endangers the lives of the drivers, their passengers and other road users.

To avoid such accidents, here are four simple steps to remember.

CHECK THE MAXIMUM HEIGHT OF VEHICLE BEFORE MOVING OFF

Lower the rear platform on vehicle.

Measure the total height of vehicle, its load and equipment. Apply for a police escort if the total height exceeds 4.5m.

PLAN YOUR ROUTE BEFORE DRIVING OFF

Check that the overall vehicle height is less than the height limit of road structures along the way. For a list of road structures with height limit restrictions and road closures or diversions, log on to www.onemotoring.com.sg.

OBEY SPEED AND HEIGHT LIMITS AT ALL TIME

STOP AND SEEK ALTERNATIVE ROUTE IF YOU:

- are diverted from your original route
- are lost
